

DOMETIC CRUISAIR Q-LOGIC and MARINE AIR SYSTEMS ELITE NOW NETWORK CAPABLE

Dometic Corporation recently announced that their Cruisair Q-Logic control system is now network capable. The optional CAN-bus network adapter is available for new systems and as a retrofit for existing installations. The adapter adheres to CAN-bus Standard 2.0B and is fully ISO-compliant. This adapter development followed the same guidelines as the network controller available for the Marine Air Systems Elite product.

During the development of the optional CAN-bus network adapter, Dometic engineers worked in conjunction with the ED&D development engineers and ED&D was able to provide a complete interface to the Cruisair and Marine Air Systems. The 427CANI E-Plex module allows for the control of either of these air conditioning units from any of the Touch Pad Switches (416TPS), Touch Pad Displays (367TPD), Full Color Touch Displays (345LCD, 350LCD) or Clock Module Displays (400ECM, 450ECM & 500CCM).

This capability further demonstrates the flexibility and comprehensiveness of the E-Plex system in allowing total integration of disparate architectures into a common user interface.
